- gamesite.txt :
 - NO, linear regression would not work well with it, after plotting it, the data curves half way through its progression and some of the points are not on the line. There doesn't seem to be a linear relationship between the data points
 - At first I thought linear regression would work well, if you try and calculate the error function (Rsquared) it would give a strong error function (about 0.8..., which is closer to 1) but after plotting it I saw it was nonlinear.
